## Experiment - 8

**Name:** Aryan Dhiman

**UID :** 23BCS12638

**Section:** KRG-3B

**Branch:** BE-CSE

**Semester :** 5<sup>th</sup>

**D.O.P:** 28/10/2025

**Subject Name:** ADBMS

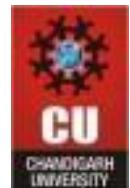

**Subject- Code :** 23CSP - 333

### **1. Aim:**

Design a robust PostgreSQL transaction system for the students table where multiple student records are inserted in a single transaction.

If any insert fails due to invalid data, only that insert should be rolled back while preserving the previous successful inserts using savepoints.

The system should provide clear messages for both successful and failed insertions, ensuring data integrity and controlled error handling.

# **DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING**

## **2. Requirement :**

- Design a robust transaction system for the student table that allows inserting multiple student records in a single transaction.
- If any insert fails due to invalid data, only that specific insert should be rolled back, while previously successful inserts are preserved.
- The system should use savepoints to control partial rollbacks.
- Provide clear messages indicating which inserts succeeded and which failed.
- Ensure data integrity and controlled error handling during bulk inserts.

## **3: Objective:**

To implement a PostgreSQL transaction system that supports batch insertion of student records with partial rollback capability.

To use savepoints to isolate failures and prevent total transaction failure.

To give real-time feedback for both successful and failed inserts.

To maintain data consistency and integrity while handling invalid or problematic data gracefully.

To provide a structured and robust approach for bulk data operations in the student table.

#### **4: Code:**

```
DROP TABLE IF EXISTS students;
```

```
CREATE TABLE students ( id  
    SERIAL PRIMARY KEY,  
    name VARCHAR(50) UNIQUE,  
    age INT,  
    class INT  
);
```

```
-- EXCEPTION HANDLING
```

```
DO $$
```

```
BEGIN TRANSACTION
```

```
-- Start a transaction
```

```
BEGIN
```

```
-- Insert multiple students
```

```
INSERT INTO students(name, age, class) VALUES ('Anisha',16,8);
```

```
INSERT INTO students(name, age, class) VALUES ('Neha',17,8);
```

```
INSERT INTO students(name, age, class) VALUES ('Mayank',19,9);
```

```
-- If all succeed
```

```
RAISE NOTICE ' Transaction Successfully Done';
```

```
EXCEPTION WHEN OTHERS THEN
```

```
-- If any insert fails
```

```
RAISE NOTICE 'Transaction Failed..! Rolling back changes.';
```

```
RAISE; -- this will rollback the entire transaction END;
```

---

```
END;
```

```
$$;
```

# **DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING**

```
SELECT * FROM students;
```

```
--VIOLATED SCENARIO
```

```
DO $$
```

```
BEGIN TRANSACTION
```

```
-- Start a transaction
```

```
BEGIN
```

```
-- Insert multiple students
```

```
INSERT INTO students(name, age, class) VALUES ('Anisha',16,8);
```

```
    INSERT INTO students(name, age, class) VALUES ('Mayank',19,9);
```

```
INSERT INTO students(name, age, class) VALUES ('Anisha',17,8); --ERROR
```

```
INSERT INTO students(name, age, class) VALUES ('Mayank',19,9);
```

```
-- If all succeed
```

```
RAISE NOTICE ' Transaction Successfully Done';
```

```
EXCEPTION WHEN OTHERS THEN
```

```
-- If any insert fails
```

```
RAISE NOTICE 'Transaction Failed..! Rolling back changes.';
```

```
RAISE; -- this will rollback the entire transaction END;
```

```
END;
```

```
$$;
```
